Caleb Kim

Dallas / Austin, TX | (703)-303-5643 **Email**: cc.kim0906@gmail.com

Website: ckim.me **GitHub:** https://github.com/caleb-j-kim **LinkedIn**: linkedin.com/in/caleb-jiho-kim/

Education

Georgia Institute of Technology Atlanta, GA
Masters of Science, Computer Science *Expected Dec 2027*

University of Texas at Dallas Richardson, TX
Bachelor of Science, Computer Science *Completed May 2025*

Experience

AMD | *Python, HTML, PostgreSQL, Figma, Plotly, CSS, Jira, FastAPI, Linux, Ubuntu, RHEL, Unix* Austin, TX
Software Developer & Datacenter Technician *June 2025 - May 2026*

- Streamlined server provisioning via **Jira-owned** end-to-end ticket workflows for initializing, restoring, and validating AMD-hosted **Ubuntu** servers, ensuring on-demand test environments and transparent cross-team hand-offs.
- Built an internal **inventory-tracking system** in **Python**, with a **FastAPI** backend, **SQL database**, **Pandas** for **data processing,** along with **Figma wire-frames, Plotly, & CSS** for an intuitive, sleek frontend improving hardware management & automation.

Tomorrow's Leaders Today | *Next.js, Node.js, Tailwind CSS, SQLite, Oauth 2.0, Figma, Prisma* Frisco, TX
Software Development Intern *Jan - May 2025*

- Constructed a **full-stack**, low-maintenance Grant / Funding Application Manager using **Next.js, Node.js, SQLite,** and **Prisma** to automate the aggregation of funding opportunities from all foundation sources through **advanced web scraping techniques**, ensuring **real-time data updates** and streamlined resource discovery.
- Integrated **Generative AI** with **Transformers.js** to auto-generate tailored **LOI verbiage** and grant application responses, while designing an intuitive **user interface** using **TailWind CSS, Headless UI,** and **Figma** to deliver a seamless **user experience.**

University of Texas at Dallas | *Python, Scikit-Learn, Pandas, NumPy, Beautiful Soup* Richardson, TX
Undergraduate Research Intern *May - Aug 2024*

- Developed and deployed a robust **web scraper** using **Python** and **Beautiful Soup** that efficiently processed **HTML** code from over **500 websites**, generating a structured dataset crucial for training an **Artificial Neural Network** to enhance translation accuracy for underrepresented dialects with at least **100,000 official users.**
- Spearheaded the "Hafez Effort" **research** initiative by defining eligibility criteria for dialect inclusion, coordinating with faculty on project strategy, and supporting the overarching mission to deliver free, **AI-driven translations** for underrepresented communities.

Projects

Tomorrow's Weather | *Python, Scikit-Learn, Flask, React.js, HTML, CSS, AWS S3, DynamoDB, Pandas, NumPy*

- Created a **Python-based** senior capstone **web application** with **Flask, React.js, HTML, & CSS** that combines **Random Forest** & **Linear Regression** models using **Scikit-Learn, XGBoost, Pandas, & NumPy**, to produce accurate **long-range** (weeks - years) climate forecasts with a **95.4% overall accuracy** through utilization of global data, spanning several centuries.
- Deployed and built the **full-stack** solution on **AWS**, using **S3** for media storage & **DynamoDB** for dataset management to ensure resource-efficiency and scalability with **real-time**, modern data collected through **automated Python scripts**.

Fintasy | *Vue.js, Python, Vite,js, PostgreSQL, Docker, FastAPI, Alpaca, Nginx, Pydantic, Uvicorn*

- Led the design and implementation of a **full-stack paper trading simulation website** with **Vue.js**, achieving a **98% accuracy** in **real-world market data** through virtual tournaments, boosting user engagement by **25%.**
- Engineered a robust **Python backend** coupled with a **PostgreSQL database** to manage stock and user information, enhancing **data retrieval efficiency by 30%** through optimized **caching** strategies.

Course Recommendation Chatbot | *Python, React.js, Scikit-Learn, FastAPI, Pandas, NetworkX, Pydantic, Uvicorn*

- Created a **React.js web-based chatbot** for educational course recommendations using a **Python** backend, integrating **NLP** techniques & **CORS** configurations to process user inquiries with a **95% accuracy** in response relevance.
- Implemented a **dynamic course recommendation algorithm** using **topological sorting** in **NetworkX** & custom filtering logic to achieve **30% reduction** in redundant course suggestions by improving exclusion of completed courses.

Technical Skills

Languages: Python, JavaScript, Java, HTML, CSS, SQL, C++, C#, C
Frameworks: NumPy, React.js, Next.js, Scikit-Learn, PyTorch, Vue.js, Vite.js, Matplot-Lib, Tensorflow
Technologies: Pandas, Git, Git Bash, GitHub, Docker, Docker Containers, PIL, AWS S3, DynamoDB, PostGreSQL
